# ☐ Password manager

A **password manager** is a tool (usually an app or browser extension) that helps you store, generate, and manage your passwords securely. Instead of trying to remember all your different passwords, you only need to remember one **master password** to access the password manager.

## Why is it useful?

**Stronger Security:** It can create strong, unique passwords for each account, reducing the risk of being hacked.

**Convenience:** No need to remember multiple passwords or reset them frequently.

**Time-Saving:** Autofills passwords for you when logging into websites or apps.

**Organization:** Keeps all your passwords in one safe place.

**Alerts:** Some password managers notify you if any of your saved passwords are weak or have been exposed in data breaches.

 In short, it makes your online life easier and safer.

## Using Dashlane Password Manager: A Demo

### Master Password

The Master Password is like a key to your Dashlane account. Use it to unlock all your saved passwords and personal information.

### Home Page

When you log in, you'll see the Dashlane home page. This is where you manage your saved logins, personal info, and other tools.
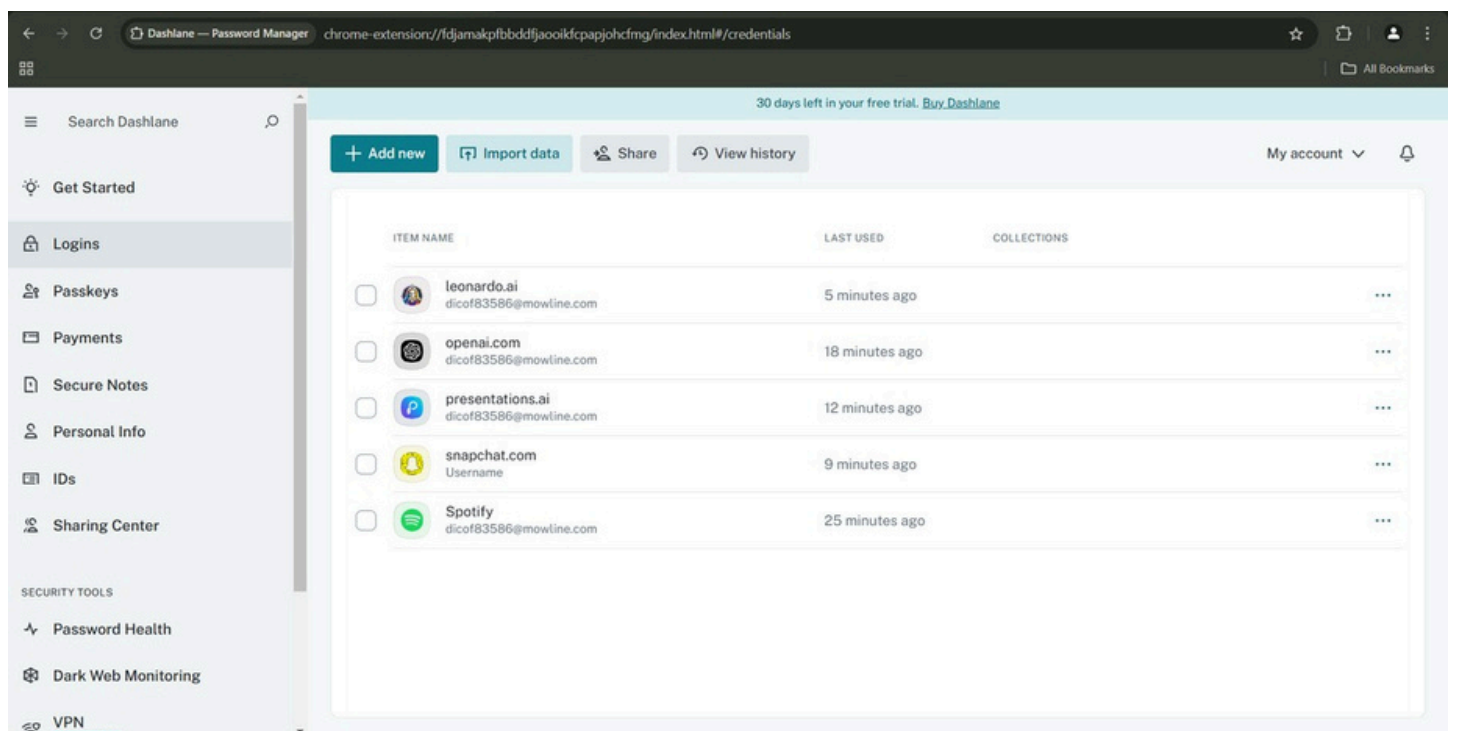

## Save Logins

In the "Logins" section, you can save usernames and passwords for any app or website.

Example: To save your Spotify login, click "Add New," type in your details, and save.

You can add logins for as many apps or websites as you need.

## Auto Login

When you log into an application (here for ex: Spotify ), Dashlane makes it easy

Look for the Dashlane logo in the login fields.

Dashlane will show your saved accounts.

Click your account, and Dashlane will fill in your username and password.

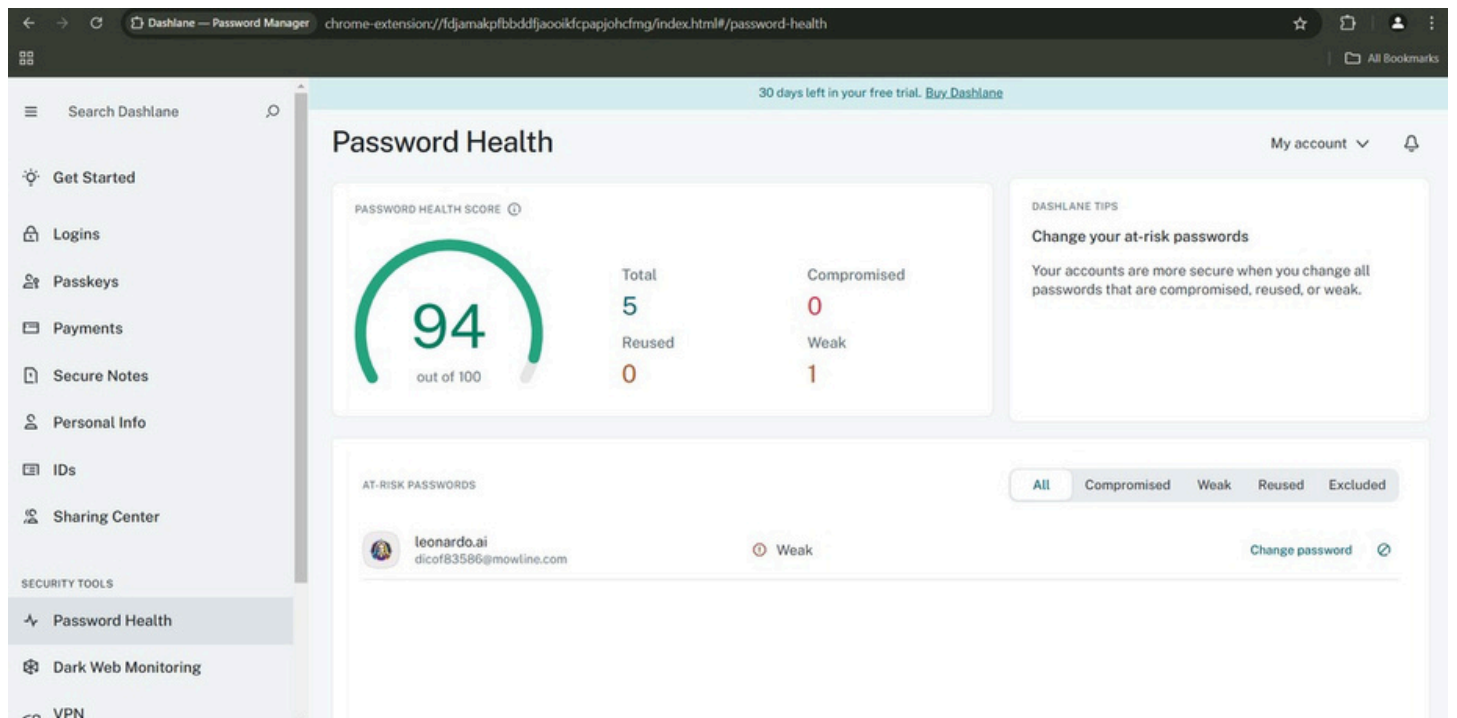

## Store Personal Info

Save personal details like addresses and phone numbers in the "Personal Info" section for quick access.
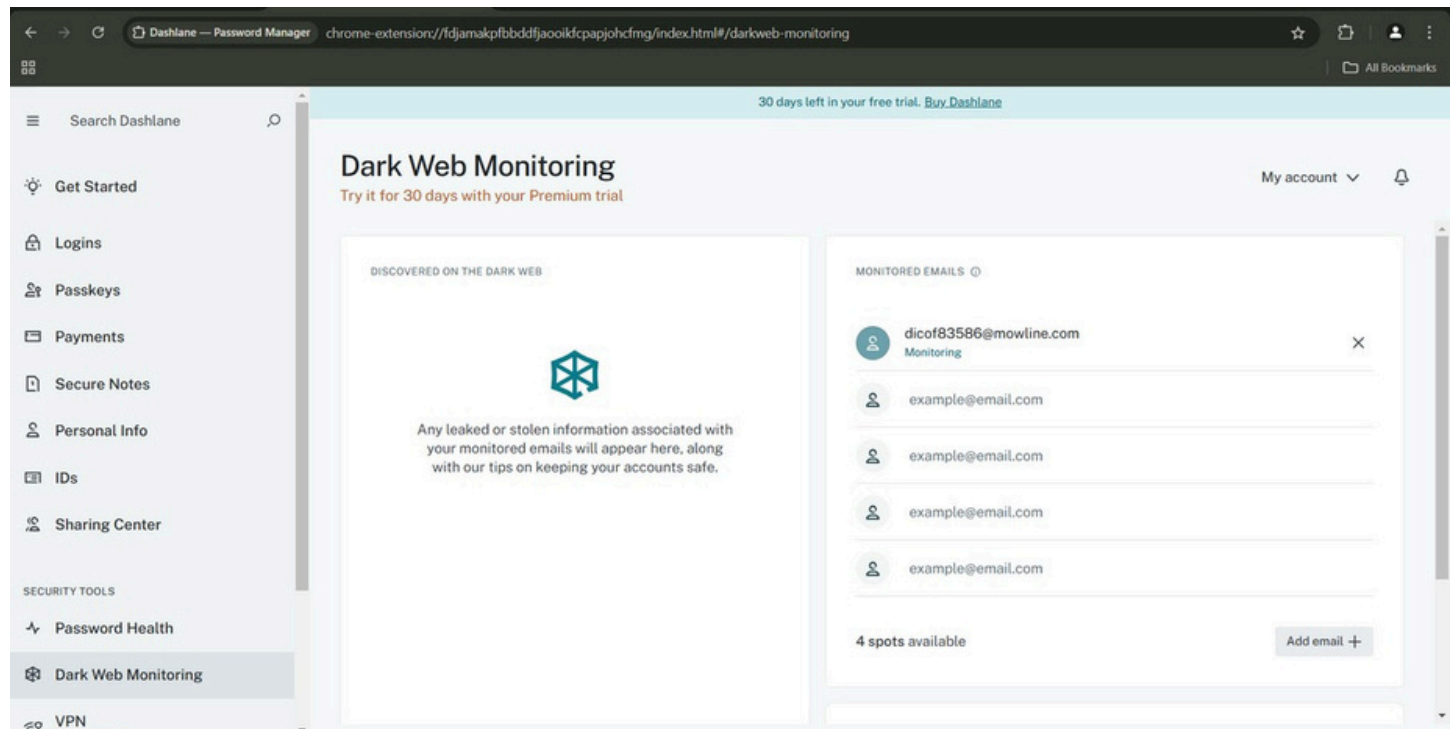

## Check Password Strength

Dashlane's "Password Health" tool shows how strong your saved passwords are.

It will highlight weak or reused passwords so you can fix them.

## Dark Web Monitoring

Dashlane scans the dark web to see if your email or passwords have been leaked. If there's a problem, it will alert you to take action.
